BACKED BY THREE-YEAR WARRANTY

INDUSTRY-LEADING CLEAN TIME

POWERFUL CLEANING TECHNOLOGY

QUIET OPERATION (69dB)

COMPACT SIZE FITS COMFORTABLY IN TIGHT SPACES

BUILT TO LAST WITH DURABLE ALUMINUM

*Before starting with routine cleaning, test runs should be conducted to establish proper cleaning time. With a standard batch of instruments, run cleaning at 5 minutes then check the condition of the instruments. Add more time until satisfactory result is achieved. Repeat the test a couple of more times to establish a reliable, proper and standard time. Typical cleaning time is 5 minutes for one layer of loose instruments or cassette.

FRONT VIEW

BACK VIEW
